Applications and plug-ins AutoCAD provides a variety of applications that are available on the Application Store, such as AutoCAD Map 3D, which is built in AutoCAD R12 and subsequent releases, and AutoCAD Architecture, which was built in AutoCAD R13 and subsequent releases.

The Add-on Architecture is a built-in application in AutoCAD Architecture. It is capable of creating solutions for AutoCAD Architecture that includes modeling, animation, rendering, and scheduling. AutoCAD also provides for extensibility, or object/file/process automation using AutoLISP, Visual LISP, VBA,.NET, and ObjectARX. In some cases, this automation may be part of an application, or it may be created as a stand-alone application or plug-in. AutoCAD provides for an active scripting environment through AutoLISP, Visual LISP, and Visual C#. Visual C# can provide for object-oriented programming techniques for automating AutoCAD drawings and applications. To support Visual C#, AutoCAD provides a Component Object Model (COM) interface that can be used by Visual C# to perform its own COM automation. COM automation can be used to automate commands, to open files and to convert drawing formats. Visual LISP is a scripting environment that is often used to automate simple batch jobs in AutoCAD, such as

Enter the serial number of the object in the lower right corner and click Next. If you are not asked to activate the license, select Activate and go to the next step. Choose the option Activate and go to the next step. You can now use Autocad and the key you have generated is active for that Autocad session only. Bolivia is putting its largely indigenous populace to work on a mammoth dam construction project. This raises the question of whether the local people have a vested interest in this operation. Do they stand to benefit economically, socially, culturally, or spiritually? How are they represented in the project? In this article, we focus on how indigenous peoples are involved in the dam project, whether they are working on the project themselves, or on other activities like tourism. The Simón Bolívar Hydroelectric Project in the Bolivian Amazon The Bolivian government plans to construct the largest hydroelectric dam in the world in the Bolivian Amazon region. The objective is to generate 600 MW electricity and increase the local population's access to electricity. The dam is part of the 'Pachamama Integral' (Integral Pachamama) project, led by the non-governmental Bolivian NGO 'Fundación Neotrópica', and funded by the Swedish government. The dam is also part of the larger 'Integral Pachamama' programme, which aims to develop the project in order to transform the local community and region. The project is a multi-partner initiative that will entail a series of hydropower dams, water reservoirs, and agricultural projects. The dam itself will be built over the Itaya River, which originates in the Peruvian Amazon region and flows through the Bolivian Amazon to the Llanos region. The dam will be located on the Bolivian side of the border between Bolivia and Peru, and has been jointly designed and built by Bolivian and Peruvian companies. Sites of significance in the Peruvian Amazon region. Photo by Armando Urteaga Bolivia's indigenous peoples The Bolivian Amazon region has the highest proportion of indigenous peoples in the country, with 64.5% of the population identifying themselves as indigenous. Bolivia has one of the highest numbers of 'indigenous peoples' in the world. Although there are a number of common myths about indigenous peoples
