
Naruto Shippuden Ultimate Ninja 5 Save File Pcsx2

Hi guys I just bought Ultimate Ninja 5, tested it on my uncle's TV and it worked fine, however my TV (SAME PS2) was glitching , ... I want to check if there is a way to get games to run smoothly on my TV. I would be grateful to the people who failed to implement it. Thanks I think it has to do with how the game looks on your graphics cards as it has some pixelated effects. If you are actually using your 1080p TV in a 1080p game, then it works on your TV. However, if your TV only supports 720p or lower, then no.
